

WATER & SANITATION IN THE WORLD'S CITIES

LOCAL ACTION FOR GLOBAL GOALS

UNITED NATIONS HUMAN SETTLEMENTS PROGRAMME

10%
discount

'In a rapidly urbanizing world, the battle for water and sanitation will have to be fought in human settlements, particularly in slums and shanties of the growing urban areas of developing countries. Achieving these avowed goals will remain a distant dream if we do not focus on the slums of Nairobi, the bustees of Calcutta and the favelas of Rio. The analytical work in this report and its key finding – that local solutions are key to achieving global goals – should provide a valuable input to the work of the Millennium Task Force.'

ANNA KAJUMULO TIBAIJUKA, UNDER-SECRETARY-GENERAL, UNITED NATIONS, AND EXECUTIVE DIRECTOR, UN-HABITAT

'This is surely the most impressive and important publication to come out of the UN system for many years. It brings together 20 years of evidence from attempts to build the foundations of public health in the developing world – hygiene, sanitation and water supply – and shapes that evidence into the lessons and insights that show the way forward.'

PETER ADAMSON, FOUNDER, NEW INTERNATIONALIST, AND AUTHOR AND RESEARCHER OF UNICEF'S THE STATE OF THE WORLD'S CHILDREN FROM 1980 TO 1995

'This important book addresses all of the main policy questions facing the water supply and sanitation sector, and debunks most of the myths and misconceptions which have beset it in recent years. It should be prescribed reading for anyone interested in water and sanitation policy.'

SANDY CAIRNCROSS, PROFESSOR OF ENVIRONMENTAL HEALTH, LONDON SCHOOL OF HYGIENE AND TROPICAL MEDICINE

WATER AND SANITATION IN THE WORLD'S CITIES

LOCAL ACTION FOR GLOBAL GOALS

The world's governments agreed at the Millennium Summit to halve the number of people who lack access to safe water, mainly in the world's cities, by 2015. With rapidly growing urban populations the challenge is immense.

- A comprehensive and authoritative assessment of the problems and how they can be addressed.
- This influential publication by the United Nations Human Settlements Programme sets out in detail the scale of inadequate provision of water and sanitation.
- It describes the impacts on health and economic performance, showing the potential gains of remedial action; it analyses the proximate and underlying causes of poor provision and identifies information gaps affecting resource allocation. It outlines the consequences of further deterioration; and it explains how resources and institutional capacities – public, private and community – can be used to deliver proper services through integrated water resource management.

This will be essential reading for urban planners, municipal authorities, water and sanitation engineers, development professionals, economists, environmental scientists and students in all of these subjects.

CONTENTS: Provision for Water and Sanitation in Cities ● The Impacts of Deficient Provision ● Explaining Deficiencies in Urban Water and Sanitation Provision ● Increasing Water Stress and How it Relates to Urban Water and Sanitation Provision ● Changing Perspectives and Roles in Urban Water and Sanitation Provision: Privatization and Beyond ● Improving Urban Water and Sanitation Provision as part of Integrated Water Resource Management ● Governance for Good Water and Sanitation Provision: Getting the Best Out of Public, Private and Community Organizations ● *Index*

Rethinking Water Management: Innovative Approaches to Contemporary Issues
 Edited by *Caroline Figuères, Johan Rockstrom and Cecilia Tortajada*

By 2020 the World Commission on Water predicts that there will not be enough fresh water to meet all industrial, agricultural and domestic needs because of increasing pollution, population growth and poor management. Water management at the global, regional and local levels is becoming critically important.

In this book the best of a new generation of managers explain how the growing problems can be tackled through the collaboration of governments, international bodies and the private sector. They offer vital new perspectives on some of the most acute problems and show how a new set of paradigms can be applied in ways that can avert the looming crisis.

CONTENTS: Introduction ● New Development Paradigms for the Water Sector ● Global and Local Agendas ● Economic Globalization, Water and Equity ● Managing Rain for the Future ● Recycling and Reuse ● Rethinking Groundwater Management ● Water Rights and their Management ● The Future of Transboundary Water Management ● Development Potential in a Basin-wide Approach ● Pumping Money in the Water Sector ● The Way Forward ● Bibliography, Index

Blue Gold: The Battle Against Corporate Theft of the World's Water
Maude Barlow and Tony Clarke

A global shortage of water is looming as one of the most threatening ecological, economic, and political crises of the 21st century with privatization just accelerating the cycle of inequality. To achieve water security the world needs to recognise access to water as a fundamental human right, not dependent on ability to pay.

Dams and Development: A New Framework for Decision-Making
World Commission on Dams

This first comprehensive global and independent review of the performance and impacts of dams presents a new framework for water and energy resources development, and develops an agenda of seven strategic priorities and corresponding criteria and guidelines for future decision-making.
